

Israel J. Ortiz

FULL-STACK WEB APPLICATIONS DEVELOPER

Leesburg, VA | [israeljortizcpssc@gmail.com] | [540-498-0854] | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Full-stack developer who builds **data-dense, decision-support web applications** end to end — **TypeScript/React** front ends on **Python/Django** back ends, designed with usability, performance, and security as first-class concerns. I specialize in turning large datasets into benchmarking dashboards that teams trust to make high-stakes calls, and I thrive on a collaborative, in-office engineering team.

TECHNICAL SKILLS

Front end TypeScript, React (Hooks), Vite, Tailwind CSS, responsive & mobile-first UI, accessibility (WCAG 2.1), Recharts / D3 data visualization

Back end Python, Django, Django REST Framework, PostgreSQL, REST API design, authentication & role-based access, query optimization

Tooling Git / GitHub, Figma (design hand-off), Trello, Docker, CI/CD, agile / scrum, automated testing (pytest, Vitest)

Environments Linux & macOS, command line; deployment on Render / Fly.io / AWS; AI-assisted development (code I can fully explain)

PROFESSIONAL EXPERIENCE

Full-Stack Web Developer — [Ambrose] [Apr 2023 – Present] · [VA] Designed and shipped internal and client-facing web applications in **React + TypeScript** on a **Django REST** back end, owning features from Figma hand-off through production deployment.

Built an interactive analytics dashboard that turned a 40,000-row dataset into filterable cost and performance KPIs — replacing a six-hour manual reporting process with a view that updates in seconds, and cutting API response times ~60% via pre-computed aggregates and query caching.

Hardened application **security** with role-based access control and serializer-level input validation, clearing every high severity finding from a third-party review.

Worked in two-week **agile** sprints with product and stakeholders via Trello, Figma, and Git, and mentored two junior developers through code review and pairing.

Web Developer — [SUCCESS Magazine] [Jun 2023 – Present] · [Fredericksburg, VA] Developed responsive, **mobile-first interfaces** in React and raised Lighthouse accessibility scores from the low 70s to 95+ by standardizing a reusable, WCAG-compliant component library.

Implemented **Python/Django** REST endpoints for new product features with test coverage above 85%, collaborating across the stack on Linux and macOS.

Partnered with designers in **Figma** to maintain consistent branding and graphic standards across the application suite, and managed all work in **Git** with feature branches and pull-request reviews.

Junior Software Developer — [SPCA International] [Jun 2021 – Jun 2023] · [Washington DC] Built and maintained a customer-facing web portal — resolving 100+ bugs on a weekly release cadence and writing SQL / Django ORM logic to surface reporting data — and helped migrate a legacy interface to a modern React front end.

SELECTED PROJECTS

Gauge — Sustaining-CAPEX Benchmarking Dashboard [live](#) | [source](#) | [writeup](#) **React/TypeScript + Django REST** app benchmarking capital projects against a 2,000-project synthetic dataset: slice by type, phase, region, and size; quantify cost gaps vs. P50/P80 norms; score front-end-loading readiness; and roll up to a shareable portfolio report. Deployed live, with benchmark statistics computed server-side as a single source of truth.

React A11y Data Table — Reusable React/TypeScript Component [source](#) Generically typed, fully keyboard-navigable table with sorting, debounced filtering, and accessible pagination — a showcase of front-end craft and accessibility.

EDUCATION & ADDITIONAL

[**M.Eng. in Computer Science w/ Software Engineering Concentration**] — [Virginia Tech] · [2023]

[**B.S. in Computer Science & Economics**] — [University of Mary Washington] · [2019-2022]
